How judging works

01

You demo once

To your partner's pod. Same timed slot for every team, announced at 4:18 calibration.

02

Judges score

Six criteria, 0 to 4 each, on a form.

03

The partner picks

Its track's winner, from the judges' ranking.

04

Three winners

\$750 each, one per partner.

Level 2 of 4 is a solid team.

Market size, pricing and polish score zero.

GOODWILL BOOKS	Prior-month payment statement	Monthly email attach
EBAY	Listing sales report	Seller Center • chang
AMAZON	Payments summary	Seller Central • requ

Current state • Each source has its own access path, timing and business rule

THE ALLOCATION WORKBOOK IS THE MAIN

After the source data is gathered, a prior-month workbook is copied forward and loaded into Business Central.

01

ARCHIVE INPUTS

Save all files under Accounting / Month End / year / month / Journal Entries / E-Commerce JEs.

02

ROLL WORKBOOK

Open the prior-month E-Commerce Allocation file and save a current-month copy.

04

GENERATE ENTRIES

Workbook logic flows data into the Journal Entry tabs for each report.

05

POST GENERAL JOURNAL

Copy and paste the journal-entry output into a Business Central General Journal.

The dependency is broader than a single upload: month-end rules, source-specific timing, and invoice creation all sit inside the manual process.

THE TARGET CLOSE AUTOMATES THE RULES, NOT JUST THE DOWNLOADS

A controlled integration should acquire every input, preserve source rules and entries with reconciliation evidence.

01

ACQUIRE

reports

CONTROL PRINCIPLE

Business Central receives balanced, traceable journal and invoice payload and posting errors remain visible for review.

FIVE WORKSTREAMS DEFINE THE BUILD

The attachment clarifies the required scope: source intake, embedded workbooks, and entry types must be addressed.

WORKSTREAM	WORK TO COMPLETE
1 SOURCE INTAKE	Confirm access and automate downloads/email pickup for Monkey, Upright, ShopGoodwill, Books, eBay and Amazon.
2 SHIPPING + ENRICHMENT	Ingest bank activity; reproduce FedEx filters/refund netting; Jewelry Supplier enrichment.
3 RULES + MAPPING	Document orange-field inputs, workbook formulas, controls, and source-to-account/dimension mapping.
4 BUSINESS CENTRAL OUTPUTS	Build General Journal and AR invoice payloads; capture iXBRL validation and posting response.
5 CLOSE CONTROLS + SUPPORT	Reconcile source, workbook-equivalent and posted totals; exceptions, approvals, archive and ownership.

Discovery must confirm credentials, report availability, Business Central destinations and

IMPLEMENT IN WAVES THAT PROTECT THE

Automation should be introduced source by source, then proven against the e manual posting is retired.

01

BASELINE THE CLOSE

Inventory files, owners, timing, workbook tabs, formulas, journal output and invoice output.

02

AUTOMATE ACQUISITION

Prioritize stable portal/email feeds; add shipping lookups and enrichment after core reports.

03

REPRODUCE VALIDATE

Generate BC-re outputs and compare every source, to journal line and to the workbook

DEFINITION OF DONE

Every required source is captured • Period and shipping rules are reproduced • Invoice output reconciles • Posting status and exceptions are retained

// YOUR SUNDAY

Nick Ashworth
Casanova, K
Ryan Geraghty

AI-Enhanced Resilient Communication

“Open commercial networks like LoRa mesh and Direct-t broadcast footprints, and while encryption protects messages, it can't hide metadata or the fact that a communication happened. Our teams to use generative AI to dynamically mask or obfuscate data through techniques like synthetic traffic generation, protocol-level automated cryptographic structuring, so communication blends into network noise. The goal is a working framework that strengthens resilience without relying on proprietary or classified infrastructure.”

// Can be approached in simulation. No hardware needed.

AI-Driven RF Spectrum Analysis

“Commercial software-defined radios have made it easy but turning that data into useful insight still requires deep users don’t have. This track asks teams to pair SDR output multimodal AI to automatically characterize signal metadata (bandwidth, modulation), translate complex spectral visualizations into natural language summaries, and flag anomalies in the ambient spectrum. Solutions must rely on open-source, publicly documented tools and

teams

teams

When a partner is full, pick another problem.

How to form a team

01

Pick the problem you want.

02

Go to that partner's board.

03

Form your team.

Come with teammates, find them on the spot.

Your team name is what the judges see on the ballot.
Register it once, spell it the same everywhere.

Find your team

- // Need a team? You are on the big screen, by the problem you want.
- // Found one? Scan the sign-in code again and mark yourself set. You come off the screen.
- // Changed your mind about the problem after the pitches? Scan again.

Sign up your team

Find your partner's table, take
the next empty row.

or ask an organizer for the link

// SATURDAY • 1:00 PM • READ ALOUD

Submit your work by 4:00 PM Sunday

// THE FORM ASKS FOR

- 01 Your Google Slides link, with the recorded demo video inside, shared “anyone with the link”
- 02 Your GitHub repo link
- 03 Sources cited: open-source projects, tooling, models, APIs, templates you used
- 04 What you built versus what you used

innovations

Resubmit any time before 4:00; the last one counts.

Your slides run from the room computer, so the video must be embedded in the Google Slides and shared as anyone with the link.

Sunday 65 / 95

What you are scoring, and how

Nobody is pitching a startup. Three partners, Beacon Health, Michiana, and DIU, each handed us a real operational problem in the morning. Every team picked one of those problems and built a solution. We do not own the idea, so do not score ambition, market size, or

Score what you saw. Six dimensions, 0 to 4 each, weighted to total 100: Working Evidence (26), Partner Problem Fit (22), Fits The Problem (15), Technical Substance (15), Demo Clarity (11), X-Factor (7). 70 is the default for a competent team.

What you are scoring, and how

If you did not watch a team, leave it blank or zero, and your scores are shifted to a column inside your own pod, so you cannot help being tough or generous.

Submit one ballot per team, as each team finishes. At another response' for the next team.

What judges score

Level 2

26

22

19

26

Working Evidence

What does the recorded demo show running, end to end?

22

Partner Problem Fit

Does it solve the partner's problem with a clear, rational approach?

19

Fits Their Constraints

Did they engage the partner and understand the problem beyond the problem?

15

Technical Substance

How much of the hard part is real and built by the team?

11

Demo Clarity

Did they clearly articulate what they built?

7

X-Factor

Did this team stand out? Would you back them?

Each is scored level 0 to 4. Level 2 is a solid team.

Level 2 and level 4

26 Working Evidence	2	Parts run on screen, but one step is a cut, a screenshot or narration	4
22 Partner Problem Fit	2	Right topic, but only partly solves the partner's problem	4
19 Fits Their Constraints	2	Named a real limit from the partner, but the build does not reflect it yet	4
15 Technical Substance	2	Most impressive moment is simulated, and they said so	4
11 Demo Clarity	2	You understood, but only by the end	4
7 X-Factor	2	Solid, but does not stand out	4

Keep building: Innovation Sprint Lab

**INNOVATION
SPRINT LAB**

What it is

A student-run program at Notre Dame. A partner brings a real problem; a student team ships working software in a ten-week sprint, October to December, with weekly mentorship from industry engineers.

Where it goes

The finished software demos at the Showcase on December 5. The Fall 2025 cohort took 15 students from 70+ applicants; they went on to NVIDIA, AWS, Boeing and IBM.

// SUNDAY • 8:00 PM

Thank you SprintHack@ND

// Every team gets its judges' written comments.

// The Sprint Lab has its own application; your weekend

// Demo Day: Saturday, December 5.

Awards 88 / 95

Appendix: the criteria

The exact level sentences on the judging form

H
i

Working Evidence

What does the recorded demo show running, end to end?

- 4 Full workflow runs in one take on more than one example, including at least one edge-case input
- 3 Full workflow runs on screen in one take, on the team's own system
- 2 Parts run on screen, but one step is a cut, a screenshare, or a narrated slide
- 1 Mockup, slides or narration only
- 0 Nothing runs; no demo video

Judges watch: the recorded demo

Stack size does not count

Partner Problem Fit

Does it solve the partner's problem with a clear, rational

- 4 Fully solves it in the most efficient way, with the fewest
- 3 Fully solves the partner's problem
- 2 Right topic, but only partly solves the partner's problem
- 1 Solved a different, easier problem
- 0 No link to the partner's problem

Open with the partner's problem, in their words

Fits Their Constraints

Did they engage the partner and understand the problem?

- 4 Build works within all their key limits, so the partner can use it
- 3 Build works within one real limit of the partner (time, money, systems)
- 2 Named a real limit from the partner, but the build doesn't fit
- 1 Surface understanding, generic talk
- 0 No sign they engaged the partner

Beacon: no patient data leaves

Goodwill: tools they already pay for

Technical Substance

How much of the hard part is real and built by the team?

- 4 Hard part is their own work, and they can explain its build next
- 3 Hard part is real, minor edges simulated and disclosed
- 2 Most impressive moment is simulated, and they said
- 1 Nobody can explain how a part works
- 0 Claimed capability does not exist or is not their work

AI coding tools are fine

Explain your own system

Demo Clarity

Did they clearly articulate what they built?

4 Clear in the first 30 seconds, on time, and you can re

3 Clear from the start, with one stumble

2 You understood, but only by the end **solid team**

1 You still do not understand what they built

0 No demo delivered

Comprehension, not polish

X-Factor

Did this team stand out? Would you back them?

4 You would back them, and the partner would want to

3 Stands out, you want to see more

2 Solid, but does not stand out **solid team**

1 Forgettable

0 Serious concern or red flag

The whole demo and the team
